

Dr. David K. Minton
Jefferson Medical Park
1121 S. Jefferson St.,
Roanoke, VA 24106

10/23/92

Dear Dr. Minton,

It was thoughtful of you to send me copies of the JFK assassination pages in the 10/7 JAMA.

After the first JAMA adventure in rewriting the JFK assassination I decided that it provided the basis for a book I do not take time now to describe. I've been working on it since. So, when I heard of this second treatment I borrowed a copy and used it.

The book will be quite large.

and having no agent it may perhaps be only a record for history.

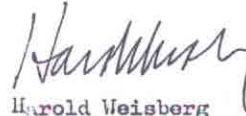

I have addressed virtually every statement about the assassination and the autopsy by comparing it with the official evidence.

It is tragic for all those people that they decided to speak when they have so much trouble telling the truth even by accident!

Even in small things. Lundberg correctly guessed that anything indicating it was new about JFK's Addison's disease would make news. It did. To make it newsworthy he implied that it had not been proven, just conjectured. (Page 1737) It happens that the late Dr. John Nichols was a friend of mine. He gave me a copy of what he wrote for JAMA. It is titled, "President Kennedy's Adrenals." He had no doubt at all that JFK was an Addisonian.

If you see anything else relevant in any medical publication I will appreciate a copy because I see no such publications.

Sincerely,

Harold Weisberg
